Dynamic Technical Sales Executive and Full Stack Web Developer. Skilled in delivering impactful product demonstrations, building scalable backend systems, and ensuring high-quality software through hands-on QA. I specialize in optimizing database structures, developing responsive web applications, and bridging the gap between technical functionality and business value. With a strong ability to communicate complex concepts clearly, I enhance client engagement and contribute to overall operational efficiency.

Main Technical Skills and Tools:

Laravel (Livewire) • Next.js • MySQL • Vue.js • Bootstrap • Tailwind CSS

Skills

- Product demonstration
 - Quality Assurance Tester
 - Full Stack Web Developer
 - Database structure optimization
-

Work History

May 2025 Up to Present	Freelance Developer	
Experienced in building scalable web applications using Laravel, Livewire, and Next.js, and developing robust software solutions with C#.		
November 2022 - May 2025	Technical Sales Executive / Web Developer	<i>Silentmode Sdn. Bhd, Bandar Baru Bangi, Selangor, Malaysia</i>
As a Web Developer , I contributed to the development of RONLapor , a fuel reporting system designed to support fuel station operations. Our team consisted of two developers: one focused on the mobile application , while I took lead on the backend development . I was responsible for building the Content Management System (CMS) and implementing core backend functionalities that ensured efficient data handling, report generation, and system scalability.		
As a Technical Sales Executive , I conducted product demonstrations and technical presentations for our flagship product, RONPOS — a comprehensive Fuel Retail Point-of-Sale (POS) system. My role involved not only showcasing the product's features and capabilities to prospective clients but also translating technical details into practical business value, assisting in pre-sales activities, and providing client support during product onboarding.		
Additionally, during downtime or when development tasks were limited, I contributed to Quality Assurance by testing the RONPOS application. This involved identifying bugs, validating features, and ensuring the system met performance and usability standards before deployment.		
July 2021 - November 2022	Full Stack Web Developer	<i>EShip BPO Corp., Valenzuela, Metrol Manila (Remote)</i>
I used CodeIgniter for backend development, focusing on building robust APIs and managing data flow within the system. For the frontend, I utilized jQuery to implement interactive features and ensure a responsive user experience.		
In addition to my development work, I also contributed as a Quality Assurance Tester , performing manual testing to identify bugs, validate functionalities, and help maintain the overall quality and reliability of our products.		
March 2021 - July 2021	IT (Job Order)	<i>DOH Regional Office 2, Tuguegarao City, Province Of Cagayan, Philippines</i>
During the pandemic, I worked at the Department of Health (DOH) Regional Office as an IT Support Staff , where I was responsible for a range of IT-related tasks , including providing technical assistance, troubleshooting hardware and software issues, and maintaining the office's digital infrastructure to ensure seamless operations.		
My primary responsibility, however, was utilizing Microsoft Excel to manage and organize data related to COVID-19 vaccination activities across the entire region. This involved recording, consolidating, and maintaining accurate vaccination records to support reporting and decision-making processes.		

February 2017 - April 2019 **IT Assistant** *SuperValue, Inc, Pasay, Metro Manila*

As part of the development team, I was responsible for maintaining existing internal applications to ensure their continued stability, performance, and usability. In addition to maintenance, I developed custom web-based tools using **ASP.NET (vb)** to support and streamline employees' daily tasks. These applications were designed to improve operational efficiency, reduce manual workload, and meet the specific needs of different departments within the organization.

Education

June 2001 Holy Trinity Montessori School, *Tuguegarao City, Province Of Cagayan, Philippines*

March 2012 University of St. Louis Tuguegarao City, *Tuguegarao City, Province Of Cagayan, Philippines*

May 2016 **Bachelor of Science in Information Technology**
St. Paul University Philippines, *Tuguegarao City, Province Of Cagayan, Philippines*

- Best in Thesis (Silver Medal): Graduate School Evaluation System (Web Platform)
